

LIGHT EMITTING ELEMENT AND LIGHT EMITTING DEVICE
WITH THE LIGHT EMITTING ELEMENT AND METHOD
FOR MANUFACTURING THE LIGHT EMITTING ELEMENT

Abstract of the Disclosure

5

A light emitting element has a base made of heat
conductive material, a wire plate made of an insulation
material and secured to an upper surface of the base.
Conductive patterns are secured to the wire plate, and a light
10 emitting chip is secured to the base at an exposed mounting
area. The light emitting chip is electrically connected to
the conductive patterns.
